

Python File Input Output

Write a Python program to read an entire text file

```
def file_read(fname):  
    txt = open(fname)  
    print(txt.read())
```

```
file_read('test.txt')
```

Write a Python program to read first n lines of a file

```
def file_read_from_head(fname, nlines):  
    from itertools import islice  
    with open(fname) as f:  
        for line in islice(f, nlines):  
            print(line)  
file_read_from_head('test.txt',2)
```

Write a Python program to append text to a file and display the text.

```
def file_read(fname):  
    from itertools import islice  
    with open(fname, "w") as myfile:  
        myfile.write("Python Exercises\n")  
        myfile.write("Java Exercises")  
    txt = open(fname)  
    print(txt.read())  
file_read('abc.txt')
```

Write a Python program to read a file line by line and store it into a list

```
def file_read(fname):  
    with open(fname) as f:  
        #Content_list is the list that contains the read  
lines.  
        content_list = f.readlines()  
        print(content_list)  
  
file_read(\'test.txt\')
```

Write a Python program to read a file line by line store it into a variable.

```
def file_read(fname):
    with open (fname, "r") as myfile:
        data=myfile.readlines()
        print(data)
file_read('test.txt')
```

Write a Python program to read a file line by line store it into an array.

```
def file_read(fname):
    content_array = []
    with open(fname) as f:
        #Content_list is the list that contains the read
lines.
        for line in f:
            content_array.append(line)
        print(content_array)

file_read('test.txt')
```

Write a python program to find the longest words.

```
def longest_word(filename):
    with open(filename, 'r') as infile:
        words = infile.read().split()
        max_len = len(max(words, key=len))
        return [word for word in words if len(word) == max_len]

print(longest_word('test.txt'))
```

Write a Python program to count the number of lines in a text file.

```
def file_lengthy(fname):
    with open(fname) as f:
        for i, l in enumerate(f):
            pass
    return i + 1
print("Number of lines in the file: ",file_lengthy("test.txt"))
```

Write a Python program to count the frequency of words in a file.

```
from collections import Counter
```

```
def word_count(fname):
    with open(fname) as f:
        return Counter(f.read().split())

print("Number of words in the file :",word_count("test.txt"))
```

Write a Python program to get the file size of a plain file.

```
def file_size(fname):
    import os
    statinfo = os.stat(fname)
    return statinfo.st_size

print("File size in bytes of a plain file: ",file_size("test.txt"))
```

Write a Python program to write a list to a file.

```
color = ['Red', 'Green', 'White', 'Black', 'Pink', 'Yellow']
with open('abc.txt', "w") as myfile:
    for c in color:
        myfile.write("%s\n" % c)

content = open('abc.txt')
print(content.read())
```

Write a Python program to copy the contents of a file to another file .

```
from shutil import copyfile
copyfile('test.py', 'abc.py')
```
