

Write a program that reads two lines of input and prints those two lines in the reverse order. (Print the message given in the second line of input before the first line of input)

Explanation

In the given example, the first line of input is "Book" and the second line of input is "Pen", so the output should be

Pen

Book

Sample Input 1

```
Book
Pen
```

Sample Output 1

```
Pen
Book
```

Write a program that takes a word *W* as input and prints "Hello" followed by the given word *W*.

 Note

There should be a space after Hello

Sample Input 1

```
World
```

Sample Output 1

```
Hello World
```

Sample Input 2

```
Anjali
```

Sample Output 2

```
Hello Anjali
```

For this problem, you need to write code to read a single line of input and print the line after the message "Given input: ".

Sample Input 1

```
Happy Coding
```

Sample Output 1

```
Given input: Happy Coding
```

Sample Input 2

```
Tech Foundations
```

Sample Output 2

```
Given input: Tech Foundations
```

For example, if the given words are **Milk** and **shake**. The output should be **Milkshake**.

Sample Input 1

```
Milk  
shake
```

Sample Output 1

```
Milkshake
```

Sample Input 2

```
Cater  
pillar
```

Sample Output 2

```
Caterpillar
```

For example, if the given first name is **Harry** and the given last name is **Potter**, the output should be **Harry Potter** as the first name and last name are joined with a space.

Sample Input 1

```
Harry  
Potter
```

Sample Output 1

```
Harry Potter
```

Sample Input 2

```
Hugo  
Clive
```

Sample Output 2

```
Hugo Clive
```

For example, if the given inputs are **Robert** and **21**, the output should be **Robert is 21 years old**.

Sample Input 1

```
Robert
21
```

Sample Output 1

```
Robert is 21 years old
```

Sample Input 2

```
Lucy
18
```

Sample Output 2

```
Lucy is 18 years old
```

Write a program to print the given input word three times in a single line separated by spaces

Sample Input 1

```
Apple
```

Sample Output 1

```
Apple Apple Apple
```

Sample Input 2

```
children
```

Sample Output 2

```
children children children
```

Write a program that prints a simple square using star (*).

Explanation

Print two stars on the first line and two stars on the second line.

Sample Input

Sample Output

```
**  
**
```

Write a program that prints a simple square using star (*).

Explanation

Print two stars on the first line and two stars on the second line.

Note

There is a space after every star

Sample Input

Sample Output

```
* *  
* *
```

Write a program that prints a simple triangle using star (*).

Explanation

Print a star on the first line and two stars on the second line.

Sample Input

Sample Output

```
*  
**
```
